RE: [What are the most common words in each transport method.]

EDA was performed to determine that given the most preferred transport methods what are the most common words for each class.

Transport Common Words by Dominant Method

After filtering out stop words, the most common words across the classes seem similar across the classes except the public transit which seems to have bus as a highly common word and most likely to be a stronger predictor. While words like city would likely be a weak predictor since it is common no matter the class.

Future questions could involve asking how much predictive power can the word bus add to a model?
