RE: [What are the most common words within biggest fear.]

Apprehension Common Words by Biggest Fear

After filtering out stop words, by far the most common word in all classes is “people” and “nervous” no matter the fear. An interesting thing to note is that the word “feel” is the 3rd most used word in group discussion. But did not make the top 10 in the other categories.

Future questions could involve analyzing the predictive power of the word “feel” and seeing how much adding or taking away the word “feel” from a model can improve or decrease its predictive power.
